

P-Rob performs as a sales promoter in an IT-store and demonstrates the customers how easy a wireless smartphone charger can be used.

Challenge

Our customer wanted to promote a wireless power transmission system in different IT-stores. It should be demonstrated to the visitors, how the new transmission system is used. One of the most important goals of the customer was to attract the attention of the visitors in the store.

Achieved Solution

P-Rob picks up the smartphones with its two-finger-gripper and puts them from one docking station to the next. This demonstrates the visitors, how easy charging works with the wireless power transmission system. P-Rob always performs its movements with the same accuracy and the friendly looking robot is the highlight of the store.

Company Profile

TECFLOWER is the leading specialist for wireless power and data transmission. The company combines expertise around wireless loading and uses this knowledge to implement elegant, customized and independent solutions.
