

Bundle 1

Bundle 1 is composed of the collaborative robot arm manipulator P-Rob with its Gripper P-Grip and with a pair of sensor fingers.

The robot is delivered with its tailor-made suitcase and can be mounted on a floor stand wherever you want. As a standalone pre-integrated equipment, it is ready to be used when unpacked and installed in less than 10 minutes.

The safety concept enables safe direct human-robot collaboration. No special costly protection system is needed to secure the area around the robot thanks to soft materials, force limitations and collision detection.

Programming expertise is not necessary for simple tasks or applications. Poses and paths can be manually taught. The task generator assists and guides the user to record a complete task within a few minutes instead of having to go into detailed programming and writing of code.

This Robotics bundle is a great solution for almost every user looking for an integrated and ready-to-use solutions. It is also a great platform for Research and Education institutions willing to get started with collaborative robots.
